GOGGLE TECHNOLOGY

ANTI-SCRATCH TREATMENT

Anti-scratch is a treatment applied on the external lens, giving protection against scratches. After this treatment the potential to scratch your lenses is greatly reduced.

ANTI-FOG TREATMENT

The Anti-fog treatment is applied on the internal lens, protecting against the appearance of mist in the interior of the goggle. All ROXY goggles are treated with Anti-fog.

CYLINDRICAL LENS

The cylindrical lenses have a flat appearance, and are often on our entry range models.

SPHERICAL LENS

The Spherical lenses have a bubble appearance. They offer a greater angle of vision than flat lenses, and because the lenses are de-centered your vision is clearer. And because they increase the distance between your face and the interior lens, they further reduce the build up of fog. They are Toric lenses, which means the vertical base curve is less than the horizontal.

MULTIBASE LENS

The Multibase lens is a shield with a curve that varies on the surface of the lens. It is classified in the category of Toric lenses. The base is 6 X 3.6 on the central part of the lens. There is a rapid variation of curve on the ends of the lens that offer exceptional peripheral vision.

LENS CATEGORY

WHAT IS A LENS CATEGORY?

Since 1997, this standard classifies into categories the degree of light filtration for each goggle lens. The classification ranges from Category 1 (low light filtration) to Category 5 (high light filtration).

CATEGORY 0

Lenses filter from 0% to 20% of light. These lenses are best for night riding or severe white outs.

CATEGORY 1

Lenses filter from 20% to 47% of light. The lens is slightly tinted and is recommended for bad weather and very low light conditions.

CATEGORY 2

Lens filters from 47% to 82% of the light rays. This kind of lens with moderate color is appropriate for covered weather with little luminosity.

CATEGORY 4

These lenses filter 82% to 92% of the light. They are more heavily tinted and offer the best solution for riding in all weather conditions. They offer the best protection against the sun when riding in sunny conditions.
