How to measure the length of the foot?

1. Place a ruler on the floor flat and straight on the inside part of the foot, from the heel to the toes.
2. Place an object with a flat edge on the front of the foot, so that the edge touches the tip of the longest finger. The measurement of the point where the ruler intersects the edge of the object corresponds to the length of your foot.

We recommend that you repeat the process with both feet, as normally both feet do not measure the same and you should take the longest measurement as reference.

How do you measure the length of the belt?

Use a belt you usually wear as a reference.

For belts with holes: measure from the outer end of the buckle to the middle hole.

For elastic belts: measure from the outer end of the buckle to a point about 10-15 cm. from the end of the belt.
