HELMETS TECHNOLOGY

ABS CONSTRUCTION

Our ABS construction is made up of a durable, high-density, injection-molded shell and a shock absorber expanded polystyrene (EPS) liner. ABS helmets are ideal for aggressive riding.

IN-MOLD CONSTRUCTION

Our in-mold construction fuses a double polycarbonate outer shell with shock absorber expanded polystyrene (EPS). This fusion is unbeatably lightweight. This construction allows us to build very strong helmets as light as a feather and as slim as a leaf.

GOGGLE COMPATIBLE

Get the ultimate in technical compatibility. All our helmets fit perfectly with ROXY goggles.

REMOVABLE EARPADS

We use thermoformed light and soft earpads for added warmth and snug comfort. They're easily removable to change from winter time to spring time.

WASHABLE

Our washable linings put an end to sweat soaked helmets. Ride strong and fast, doesn't matter the sweat and smell.

CLASS B

A helmet for alpine skiers and for snowboarders. Not suitable for motorcycles. www.afnor.org

SRT

Our shock response technology torsion shock liner uses a layer of flexible composite that moves with you during an angled impact, defusing & reducing shock to the brain.

HYBRID SHELL

Our hybrid shell combines the strength and shock absorption of abs construction with the lightness of in-mold fabrication for an easy-wear shell that boasts robust protection.
