

ARC'TERYX

PROTON AR HOODY

**AIR PERMEABLE INSULATION: REVOLUTIONARY
BREATHABLE MIDLAYERS**

Proton AR Hoody
Colour – Fiesta

Proton AR Hoody
Colour – Rhodei

Beginning with our innovations in the softshell space and evolving through high loft fleece, Arc'teryx has always been at the forefront of exploring the materials challenge.

Recent developments in insulations, lining materials and face fabrics offer a combination of warmth and comfort during active movement. This new generation of mid layers aims for greater versatility, providing comfort and protection through a broader range of activities and output levels, redefining the traditional notion of softshell.

New for Fall 2016 Arc'teryx brings durability, air permeability and versatility together in the Proton series. Consisting of three jacket styles for men and women (Proton LT/AR Hoody and Proton LT/AR Jacket) each specifically tuned for alpine, ice/expedition and rock climbing with technical features and systems intended to maximize personal performance.

Each Proton features multiple levels of Coreloft™ Continuous insulation warmth, Fortius™ Air 40 on the exterior for wind and water resistance, and a lining constructed of Permeair 20 for effective breathability.

Proton AR Hoody:
M's med – 455g/16oz / W's med – 415g/14.6oz

Proton LT Hoody:
M's med – 420g/14.8oz / W's med – 378g/13.3oz

Proton LT Jacket:
M's med – 365g/12.9oz

Proton AR Jacket:
W's Med – 355g/12.5oz
