Molded EVA midsole

Asolo/Vibram® rubber outsole

## ***RADIANT OUTSOLE***

A new Asolo project developed in conjunction with Vibram®. The name of the outsole development expresses all the technical features of outsole which offers outstanding performance and grip with a radial effect on base representing the moving forces. Aggressive heel cleats and an Aso-brake system enhance the grip on steep descents, while the forefoot design offers increased protection, support and control of pronation. A moulded eva midsole improves foot control and offers high level of comfort.
