HEAT PREPARED	Yes	Yes	Yes	Yes

### LINER CONSTRUCTION

ASY – Asymmetric Liner Construction – The most anatomical liner on the market utilizing asymmetrically designed tongue, toe box, collar shape, and outer lining materials all geared towards creating a better fitting and ultimately more comfortable liner.

### CUSTOMIZATION

Location of Heat Moldable + Dynashape Foam:

### VELVET MAX

Velvet Max is the softest and most comfortable lining we've ever created. Nothing else matches the instant comfort and warmth that Velvet Max provides.

### DYNASHAPE FOAM

Dynashape is a revolutionary foam that not only instantly adapts to the shape of the foot but it also provides a longer lasting fit at the same time.

\*All Hawx Men

### SIDAS FOOTBED

With our long partnership with Sidas Technologies we have created fantastic insoles which provide the best blend of proper support and initial first-fit comfort.

### CLIMA FOAM

Uniquely Atomic, this foam has air channels in its construction trapping more air against the foot creating a new standard of insulation.

### COMFORT. FIT. PERFORMANCE.

A good ski boot needs to fit. It needs to be comfortable. And it needs to perform well. It is exactly these three things consumers are most concerned about when buying new ski boots. This is why at Atomic we are committed to focusing our know-how on finding the right fit, comfort and performance in all of our boots. Thanks to our innovative technologies in both liners and shells we have created boots that are perfectly tailored to every type of skier out there. Wherever they ski.

## SHELL TECHNOLOGY

### FOOT SEGMENTATION

There is no such thing as an "All Mountain" or "Touring" foot shape. Different people have different foot shapes – ranging from narrow to medium to wide feet – regardless of where they love to ski. This is why we have designed our whole range around making sure whatever your type of skiing, we have the perfect fitting boot for you.

### CARBON SPINE

Carbon reinforced areas of the cuff and shell provide increased responsiveness and power transmission while maintaining feel and sensitivity at the front of the boot.

### FREE/LOCK SYSTEM

Lift the lever and allow the cuff to freely move, providing optimum stride as well as easy entry and exit. Return the lever and lock the cuff to the shell for 100% power on the descent.

### i-FLEX

True game improvement technology that allows the skier's forefoot to naturally flex during a turn, providing the skier with better balance, more control, and easier skiing.

### LIVE FIT

These elastic zones automatically adapt to the skier's forefoot shape providing instant comfort, improved feel, better blood flow, warmer toes ... happier feet.

### SHOCKILLA

The Shockilla 3D heel is a heel insert made from ultra-shock-absorbing rubber and soft silicone. It cushions vibrations and shocks very effectively on normal and switch landings.
