# EPIC MOVEMENT FOR CLIMBING

What makes Backland boots really stand out is the epic way they move. This is thanks to our new Free/Lock 2.0 mechanism that frees the cuff from the shell for incredible 74° cuff mobility. Plus a Frictionless Pivot for super smooth movement, a completely removable tongue for effortless climbing and a Rockered Sole made from Skywalk Rubber for extra grip.

And like all good touring boots they're super light, with the Backland Carbon Light weighing in at only 987g.

The result? Climbing with Backland feels unbelievably natural. Almost like wearing hiking boots.

## SUPERIOR CONTROL FOR SKIING

Unlike other lightweight Adventure Touring boots, Backland is packed with Atomic skiing technology for awesome downhill performance – like the Carbon Spine that provides extra strength but keeps weight down. In addition, the new Cross Lace system wraps the foot securely from three points for superb foothold. The Free/Lock 2.0 mechanism locks the cuff to the shell for stability and lets you adjust your forward lean for skiing. All that, plus you can insert an extra supportive tongue for powerful skiing as part of the Quick Click Tongue system.

# SERIOUS COMFORT

Feet get a rough ride in touring. To keep them comfortable we've created the Backland Platinum Liner. Packed with our all-mountain boot technology combined with touring-specific features, it's the most advanced touring liner ever. It's completely breathable, so excess heat and moisture can escape and feet stay drier, warmer and less prone to blisters. It's also fully washable to solve the old odor problem.

## WASHABLE

100% safe to hand wash to keep the liner clean and odor-free.

## WARM AND BREATHABLE

The perforated and waterproof engineering allows excess heat and moisture to escape for warm, dry feet all day long.

## LIGHTWEIGHT

At only 229g thanks to super lightweight Ultralon foam.

## PERSONALIZABLE

With a great fit out of the box, plus Memory Fit heat-fitting technology.

## SUPPORTIVE

With support zones in calf, ankle and tongue for superb downhill performance.

# FINE TUNE YOUR TOURING

Our brand-new Backland boots make touring much more efficient and a better experience for everyone.

## CARBON SPINE

For maximum power and minimum weight.

## FREE/LOCK 2.0

74° movement for climbing. Plus 13°-15° adjustable forward lean for skiing.

## FRICTIONLESS PIVOT

Igus polymer bushings provide a completely natural movement for effortless ascents.

## MEMORY FIT

Provides a fully personalized fit with advanced heat-fitting technology.

## ROCKERED SOLE

Made with Skywalk Rubber for easier walking and better climbing.

## BREATHABLE LINER

Perforated, quick drying and breathable for warmer, drier feet.

## QUICK CLICK TONGUE

Instantly switch from no tongue for climbing to a supportive tongue for skiing.

## CROSS LACE

Wraps the foot from three points to hold it securely.
