

blueseventy®

THIS IS OUR LAB

At blueseventy we know a thing or two about swimming. Swimmers wearing our suits have competed at every major global championships; making finals, breaking records and inspiring us to redefine our own standards.

blueseventy has been proudly swimming in open waters for over twenty years. In 2008 we moved our passion to the pool and in turn changed what people could expect from their swimwear.

Since then we've worked with athletes, coaches and scientists across the globe to ensure our products are on the cutting edge of technology, whilst staying within regulatory limits. From the most prestigious races in the world to local age group meets, we are proud to help swimmers achieve their goals and realize their dreams.

TECH SUITS

r10

Just like swimmers spend years in the pool preparing for seconds of perfection, we have obsessed about the nero r10. Unique, specially developed fabrics, combined with ground-breaking technology has produced our fastest and most compressive elite suit.

The innovative double-layered and panelled design promotes a neutral body position, which reduces drag, helps lift the legs up, reduces energy expenditure and increases distance per stroke. It takes inspiration from some of the highest performing sporting garments in the world. The r10 is first performance swimsuit to feature copper microfibers, giving it strength, as well as helping you to perform and recover more quickly.

- Flexible side panels aid fitting and comfort.
- Welded streamline seams keep you reaching forwards.
- Unique & highly hydrophobic swim specific copper fabric.
- Double layered leg panels to increase power and reduce drag.
- Advanced power back kneeskin design & mid waist fitting 3D circular jammer.

FINA approved

Available in Midnight (shown here), Aqua and Electric Purple.
