

1

Bonded Seams

All seams are bonded, not stitched, for more comfort and less chafing. Small, reinforcing stitches improve durability

2

Side Panels

innovative stretch fabric is strategically placed to compliment the compressive front and back sections

3

Durable design

thicker fabric on inside thigh panels improve the durability of the suit

4

Hydrophobic Fabric

the same lightweight, compressive fabric that is used in our elite competition swim suits

5

Locking Zipper

Our design removes the lanyard for less drag. The zipper locks when pointed down, but easily unzips when flipped up.

6

Heat Management

Reflective, breathable back material helps regulate temperature during warm-swims
