

The craft of the Dubarry deck shoe

With almost 80 years of shoe making heritage in every pair, it is no surprise that Dubarry's Classic deck shoes are renowned the world over for quality, style and comfort. Inspired by Ireland's West Coast, our deck shoes combine traditional styling with practical features.

High performance leathers are cut by skilled craftsmen after which rustproof metal eyelets and our famous Broga crest are added. The various leather pieces are then hand sewn together. A hand stitched and sealed roll top helps repel water droplets, while our award-winning outsole is bonded then stitched to the leather for added durability. High breaking strain one piece wraparound leather laces are used and special Dubarry insoles add comfort under foot.

Each step of the process is rigorously checked to ensure that only the very best quality deck shoes are packed in the famous Dubarry blue box...and are ready for anything, onboard or on shore.

The sole of the matter

Our deck shoes all benefit from our award-winning sole system.

- Award-winning patented rubber outsole design
- Formula 1 car tyre grip
- Non Slip-Non Marking™
- Interconnecting channels allow water to be dispersed away from the point of impact in several different directions simultaneously, unlike traditional razor cut soles that trap pockets of water causing aquaplaning or slippage
- Tried and tested high performance materials used in sole construction including PU and rubber, EVA and rubber and ExtraLight®

Performance leather

The leather used by Dubarry for its footwear is specially treated to absorb less moisture and requires 70% less time to dry compared to other leather types. It also ensures that your Dubarry footwear will always be soft and supple. The leather used for the Dubarry footwear is the full cowhide with all its naturally occurring imperfections.

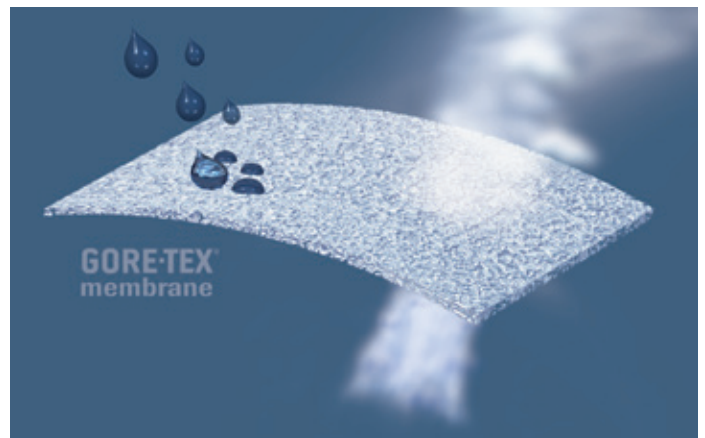

PERFORMANCE AND PROTECTION BUILT IN

To create the world's best sailing footwear Dubarry combines the finest performance materials with specially-developed technologies and design features.

GORE-TEX®

The ultimate waterproof membrane for Performance Footwear. It is the most durably waterproof and highly breathable bi-component material available. In addition to its waterproof and breathable characteristics, perspiration is also wicked away from the foot ensuring a dry and comfortable environment, even in the most extreme conditions.

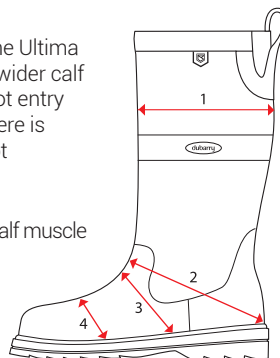

EXTRAFIT™

Dubarry has developed a unique variation of the Ultima and Shamrock boots to cater for users with a wider calf muscle in addition to an extra width fitting. Foot entry for higher in-steps has been increased plus there is additional joint measurement for the wider foot

1
Additional measurement for the more generous calf muscle

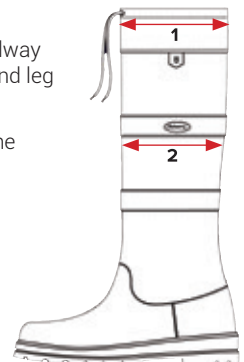

2, 3 and 4
Additional measurement for improved foot entry and extra wide fitting

SLIMFIT™

Dubarry has developed a variation of the Galway boot to cater for users with a slimmer calf and leg at points 1 and 2

Foot entry and joint measurements are as the regular fitting Galway

D-CHASSIS SYSTEM

A special 2-part system used in our Crosshaven boot and Easkey Aquasport shoe

PART 2

The toe guard provides structure and support protecting the foot from impact and abrasion

PART 1

The heel clip acts as a stabiliser providing support and protection against impact, it is also uniquely designed to neutralise pronation through the heel strike

The EVA moulded footbed acts as suspension, absorbing impact on heel strike to help the foot to control its motion

HEEL CLIP

The wings of the heel clip extends under the foot - as you load the wing the wall of the clip presses against the foot neutralizing pronation

When the foot pronates load is applied to the wing

EXTRALIGHT®

ExtraLight® sole technology provides a strong, durable and flexible outsole with the addition of an ultra lightweight midsole made from non toxic, recyclable and antibacterial materials.

Following the success of the technology in the men's range of deck shoes, Dubarry is introducing ExtraLight® sole units to the women's collection.

The secret is in the sole...

DUBARRY SAILING BOOT CONSTRUCTION

NATURALLY INNOVATIVE

Modal® is a naturally soft fabric derived from beechwood. The fabric is moisture wicking, crease resistant and flattering while being easy to wear and easy to care for too.

- **Naturally Soft**
- **Easy wear easy care**
- **Crease resistant**

FEEL THE PERFORMANCE

PrimaLoft® is a soft, extremely lightweight and breathable material with excellent water repellence to keep you comfortable, warm and dry. It absorbs three times less water, is 14% warmer when dry and is 24% warmer when wet than the competitive insulation.

HIGH-PERFORMING SYNTHETIC INSULATION

Setting the benchmark in high-performing synthetic insulation, PrimaLoft® is thermally efficient, keeping you warm without weight or bulk while resisting water. Making it the ideal choice for Dubarry performance outerwear.

- **Breathable:** Encourages the passage of air and moisture to keep you warm and comfortable
- **Fast Drying:** Accelerated dry rate for comfort on the go
- **Lightweight:** Maximum freedom of movement with all the warmth you need
- **Packable:** Packs down easily to allow you to store in small spaces
- **Superior Softness:** Unsurpassed softness which offers a flattering fit and feels great
- **Warmth Without Bulk:** Offers a high warmth to weight ratio
- **Water Resistant:** Absorbs less moisture ensuring you stay drier and warmer
