

VULCAN

VULCAN MS 61501

5316 green/black, 1615g (size 27.5), 22.5 – 31.5 + 1/2 sizes

The Vulcan was designed for the new generation of Freeriders, providing agility in the ascent and descent without compromise in hard charging performance. Vulcan offers unrivalled downhill performance, is rigid enough to be used on the most modern Freeride skis, enables front-lean rigidity to be personalized thanks to the removable Downhill Booster Tongue, and has precise heel holding, even when landing jumps. All of this combined with agility in walk mode, lightness and cutting edge technical solutions, including the Ultra Lock 2.0 lever and the Driving Spoiler 2.0. This year, we have improved the design to yield even greater downhill performance, delivered through a more progressive response provided by the new fiberglass cuff combined with the Pebax® shell. Precise skiing control is aided by the Ultra Lock Strap, which ensures complete closure and provides rapid adjustment. Vulcan offers a completely customizable setup thanks to the adjustable forward lean and the removable stoppers in the cuff, and is compatible with all types of ski touring and freeride bindings. The new Custom Plus liner is completely thermoformable. It cradles the foot to provide precision and comfort at the same time, thanks to its proprietary construction which employs three different types of foam.

SHELL PEBAX® • CUFF/SPOILER FIBER-GLASS/PEBAX® • SKI/WALK ULTRA-LOCK SYSTEM 2.0 • FORWARD LEAN 15°-18° + RELEASE FOR WALKING • RANGE OF MOTION 60° • SOLE DYN PRO TOURING

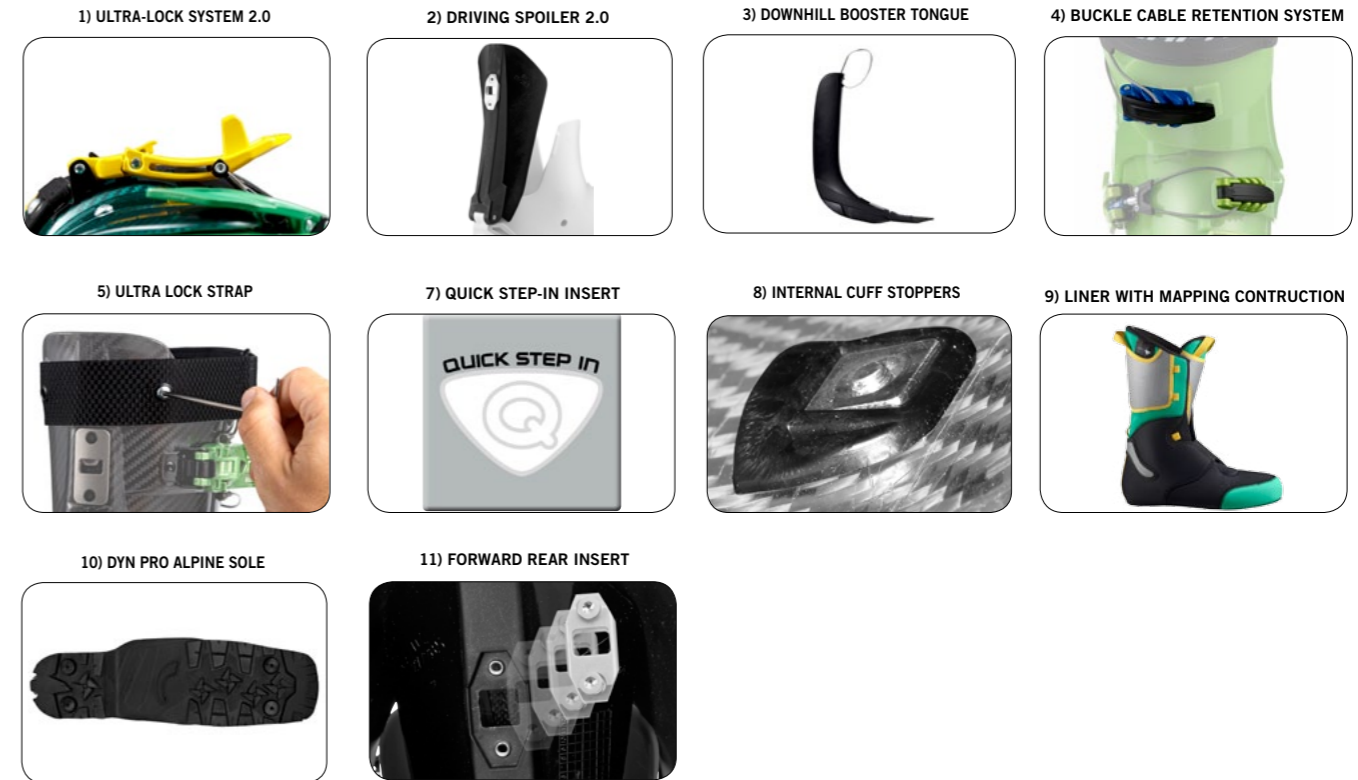

BINDING: DYNAFIT QUICK STEP-IN STANDARD TOURING

LINER: CUSTOM PLUS

THE MYTH IS RENEWED

Even greater progressive response and cradling comfort, in order to guarantee you total control during the most extreme descents and to enable you to approach them in comfort. Vulcan is the brainchild of a collaboration with uncompromising athletes of the caliber of Eric Hjørleifson, who demand total control and precision when skiing, as well as a light weight and walking comfort, in order to reach the summit as quickly as possible and conserve their energy for the most extreme descents. We have further enhanced the cradled support of the fit to deliver precision and comfort at the same time, thanks to the new and ultra-lightweight Custom Plus liner, which utilizes a body-mapping construction technique. For an even more effective closure we have introduced the new Ultra Lock Strap which, when combined with the Downhill Booster Tongue, makes the Vulcan a real Free Touring machine.

1) ULTRA-LOCK SYSTEM 2.0. The new articulated cuff buckle ULTRA LOCK SYSTEM 2.0, which, when compared to the previous version, reduces lateral snag, unhampering the transition from SKI to WALK mode and reverse.

2) DRIVING SPOILER 2.0. The rear spoiler (patent pending) slides inside the cuff, allowing the widest and smoothest cuff rotation possible. Once the Ultra-Lock system is closed, it becomes locked with the cuff, building a super-stiff downhill structure. It also alleviates friction between cuff and the inner liner, helping retain your heel in place for better walk-ability and no blisters. The new metal spoiler insert allows the user to adjust forward lean by simply removing or reassembling two fastening Torx screws.

3) DOWNHILL BOOSTER TONGUE. Add this super stiff tongue to improve the forward support and the skiing performance. This will allow you to drive any ski on the market. Remove the tongue for the uphill, or for a softer and more forgiving forward flex.

4) BUCKLE CABLES RETENTION SYSTEM. Cuff and central buckle catches are developed with a unique retain system which prevents any kind of un-wanted release. It also makes unnecessary any kind of tensioning tuning on the summit for the downhill mode if set correctly at the start of the tour.

5) ULTRA LOCK STRAP. The Ultra Lock Strap guarantees maximum performance from the boots, ultra-precise ski control as well as improved comfort by completely eliminating extra space between tongue and shin bone, and thus reducing shin bash.

6) CENTRAL 45° BUCKLE SYSTEM. For this new line we developed a new innovative central buckle which is anchored exactly on the shell pivot points. It offers the maximum heel retain on uphill and downhill. Once tightened it also keeps the cuff and shell compressed and makes the full structure stiffer.

7) QUICK STEP-IN INSERT. The exclusive patented Quick-Step-In insert ensures a 70% improvement in precision when stepping into bindings.

8) INTERNAL CUFF STOPPERS. The new articulated cuff buckle ULTRA LOCK SYSTEM 2.0, which, when compared to the previous version, reduces lateral snag, unhampering the transition from SKI to WALK mode and reverse.

9) LINER WITH BODY MAPPING CONSTRUCTION. Precision and comfort at the same time: the body mapping construction of the liner is the result of requests from the most demanding athletes. Precision and a cradling fit in the rear section, thanks to the use of thinner but slightly denser materials. Softness and comfort in the metatarsal area, in order to easily adapt to a wide range of foot shapes. Maximum comfort around the toes.

10) DYN PRO ALPINE SOHLE. Outstanding abrasion and cut resistance, combined with a design developed to give a natural walking movement and excellent grip, whatever the conditions, make this sole unit one the best performing sole units in the world of ski touring.

11) FORWARD LEAN INSERT. Unscrewing the screws and refastening the insert 180° opposite, it's possible to adjust the forward lean of 3°.
