

## RESPONSIBLE DOWN STANDARD

**Because of our genuine commitment to preserve nature, and especially regarding our care for the eider duck, we chose the Responsible Down Standard to certify most of our down insulations.**

Created by Textile Exchange, a global non-profit organization that works closely with all sectors of the textile supply chain, the R.D.S. standard guarantees the welfare of birds, along with a perfect traceability on the global supply chain. It also prohibits live-plucking (or molt-harvesting) and force-feeding. Only products with 100% certified down and feathers carry the RDS logo.

## RESPONSIBLE DOWN STANDARD

**En plus de notre engagement en faveur de la nature, et plus particulièrement des canards eider, nous avons choisi le standard R.D.S. pour une grande partie de nos isolations en plume.**

R.D.S est un standard créé par Textile Exchange, une association à but non lucratif, intervenant tout au long de la chaîne textile. Ce standard garantit le bien-être des canards ainsi qu'une parfaite traçabilité tout au long de la chaîne de production, et assure que les animaux ne sont ni plumés à vif, ni gavés. Le logo R.D.S n'est appliqué qu'aux produits contenant de la plume 100% certifiée.

## BLUESIGN®

**Eider favors the use of materials awarded the Bluesign® label.**

Bluesign® is an independent label based on a standard underpinned by five principles: 1/ Resource productivity. 2/ Consumer safety. 3/ Air emissions. 4/ Water emissions. 5/ Workplace health and safety. Organizations awarded the Bluesign® label display total transparency right along their textile supply chain without compromising functionality, quality or design. For Eider, this label guarantees that their partner is responsible and committed.

## BLUESIGN®

**Eider privilégie des matières reconnues par le label Bluesign®.**

Bluesign® est un label indépendant fondé sur une norme structurée autour de cinq domaines : 1/ Productivité des ressources. 2/ Sécurité du consommateur. 3/ Emissions atmosphériques. 4/ Pollution des eaux. 5/ Hygiène et sécurité professionnelles. Les entreprises labellisées Bluesign® affichent une transparence totale, tout au long de leur filière de production, sans compromis sur la fonctionnalité, la qualité ou le design. Ce label, c'est la garantie pour Eider d'un partenaire responsable et engagé.

## OEKO-TEX®

**Most Eider fabrics are OEKO-TEX® approved.**

OEKO-TEX® Standard 1000 is a testing, auditing and certification system for environmentally friendly operations in the textile and clothing industry. On the basis of criteria that are updated annually, the standard allows an objective assessment of the environmental balance and social acceptability achieved at all of a company's production facilities. The aim being the continual improvement of environmental performance and working conditions.

## OEKO-TEX®

**La plupart des matières Eider sont validées par OEKO-TEX®.**

L'OEKO-TEX® Standard 1000 est un système de contrôle, d'audit et de certification pour les opérations écologiques dans le secteur du textile et du vêtement. Sur la base de critères actualisés chaque année, cette norme permet une évaluation objective de l'équilibre environnemental et de l'acceptabilité sociale sur l'ensemble des sites de production de l'entreprise. L'objectif : en améliorer de façon continue la performance environnementale et les conditions de travail.

## NO MORE C8

**Since in Fall-Winter 2014, Eider decided to switch all water-repellent fabrics from C8 to C6 finishes in order to minimize the impact of perfluorinated toxins.**

Durable water repellent (DWR) finishes improve resistance to the elements and dirt. They keep you dry, warm and clean for a long time. We are now undertaking a more eco-friendly process to select this DWR treatment, while maintaining the expected level of quality.

## ZÉRO C8

**Depuis l'Automne-Hiver 2014, Eider a pris la décision de basculer tous ses tissus déperlants sur des finitions C6 au lieu de C8, afin de réduire au maximum l'impact des toxines perfluorées.**

Les traitements déperlants (durable water repellent, DWR) assurent une résistance renforcée aux éléments et aux salissures. Ils permettent de vous tenir durablement au sec et au chaud. Nous engageons un procédé plus écologique pour la sélection de ce traitement, tout en maintenant le niveau de qualité attendu.
