

GIRO / BLOK

FEATURES

EXPANSION VIEW (EXV)

Perfected at Giro's test lab in Scotts Valley, California, this groundbreaking new frame design serves up unparalleled peripheral vision. We started with a helmet-compatible goggle, and then shaved down the frame rim and added frameless zones to optimize a massive spherical lens focused on the best possible peripheral vision in a goggle.

TRIPLE FACE FOAM

Triple Face Foam is a three part system that gives you a plush contact layer against your face, a super soft middle layer that allows maximum contour, and a durable back layer that adheres to the goggle frame.

ANTI-FOG COATING

Every Giro goggle lens features our anti-fog coating to keep your vision and riding experience on point.

SPEC LENSES
