

GIRO / RANGE MIPS SPECIFICATIONS

GIRO SNOW – MIPS

MIPS - Multi-Directional Impact Protection System MIPS is a step forward in helmet design. There are three main components to a MIPS-equipped helmet: the interior foam liner, the Low Friction Liner and an elastomeric attachment system between them. In an angled impact, the elastomeric attachment system stretches to allow the foam liner to rotate independently around your head. The goal of this technology is to further reduce rotational forces.

CONFORM FIT TECHNOLOGY

The fully integrated CONFORM FIT system utilizes a 2-piece shell that literally forms to the rider's head shape by expanding and contracting with the turn of a dial. A truly adaptive design, it features a durable yet semi-flexible EPP construction that wraps around the head to provide the lowest-profile fit we've ever created and unsurpassed custom comfort.

POV CAMERA MOUNT INTEGRATION

Our integrated POV camera mounting system is stealth, secure, and super easy to operate, allowing you to instantly deploy your POV camera for filming or quickly pop it off and stash it. POV Camera Mounts are offered on the Range MIPS, Stellar MIPS, Zone MIPS, Strata MIPS and Cipher S helmets.

STACK VENT™

Our Stack Vent was developed based on research showing the majority of the warm air that can cause fogging exhausts from the center top vent of the goggle. Aligning the Stack Vent in the helmet with the center vent of your goggles helps to keep them clear and fog free while maintaining total helmet and goggle integration.

THERMOSTAT™ CONTROL

Thermostat ventilation control allows you to custom tune airflow instantly with a simple, low profile control button on the outside of the helmet. No other system is faster or easier to adjust, and nothing is more effective at keeping you comfortable.

FIDLOCK MAGNETIC BUCKLE CLOSURE

The pinch-free, one-handed Fidlock Magnetic Snap helmet buckle combines the advantages of two fastening concepts in a completely new way. Strong magnets make it easy to open and close while a secure snap functionality ensures a continuously high locking force.

X-STATIC™ FIBER

X-Static FIBER – X-Static fibers use natural silver to provide heat conductive and anti-microbial properties to help keep your hands warm, and your gloves free of odor-causing bacteria and fungus
