

HELMETS

VISOR / FREESKI / ALL MOUNTAIN

Combining protection, comfort and style is Julbo's specialist subject. To this we add outstanding technical features to meet the needs of every sport. From the Freetourer for freetouring experts to Sphere for recreational skiers, together with our new All Mountain and Junior releases, everyone can benefit from the most advanced technology to maximize their enjoyment.

5 TOP TECHNOLOGIES

VISOR THE ULTIMATE COMBINATION

Julbo's best goggles and helmet combined in one model: a pull-down photochromic REACTIV visor integrated into an In-mold helmet. Lightness, comfort and ventilation combined with the best possible vision whatever the conditions.

IN-MOLD THE ULTIMATE IN LIGHTNESS

Super-light In-mold helmets are made using an EPS shell for shock absorbency and diffusion. The shell is covered by a layer of polycarbonate which protects the helmet - and the head. Weight: 444 g.

INJECTED THE ULTIMATE IN RESISTANCE

Greater impact and scratch resistance. Injected helmets combine an ABS outer shell with an EPS inner shell to absorb and diffuse the force of impact. Weight: between 514 and 593 g.

IN-MOLD FREETOURER THE ULTIMATE IN ADAPTABILITY

A new variant of Julbo technology with the same type of construction as in-mold helmets, this ultra-light concept is 100% designed for freetouring and mountaineering. It also offers compliance with two standards: EN12492 for mountaineering and EN1077 for skiing.

HYBRID II THE ULTIMATE MULTI-TASKER

Created using two earlier technologies, these helmets have a light, In-mold skullcap for the lower part, and an injected ABS shell for the upper part to offer added protection and to make them longer-lasting. Weight: 566 g.

HELMETS

VISOR

Visor helmets are winning over more and more recreational skiers who value both protection and style. To meet the needs of the most demanding, Julbo continues to innovate with models in sophisticated finishes, bringing together the best of our helmet and goggle technologies.

HELMETS

FREESKI

Because freeriding is in our DNA, and because we know how to monitor the evolution of different sports, we're developing products that are perfectly adapted to the new demands of freeriding and freetouring.

HELMETS

ALL MOUNTAIN

Protection, fit and ventilation are here in spades so that everyone can ride all day long in the best possible comfort.
