

SNOWBOARD TECHNOLOGY

WARRANTY

We stand by our snowboards. Unless otherwise stated, K2 places a three (3) year warranty on all 2020 Snowboards, guaranteeing that they are free of defects in regards to materials or craftsmanship.

3 YEAR WARRANTY
All K2 Snowboards come with a three (3) year warranty against manufacturer's defects.

5 YEAR WARRANTY
All snowboards featuring our Bambooyah™ Core come with a five (5) year warranty against manufacturer's defects.

PERFORMANCE & FEEL

The materials and technology found on the inside of each one of our snowboards affect the personality and performance. When it comes to choosing the right snowboard for you, it is important to take height, weight, stability, power transfer, sidecut, flex, and more into consideration. Flex is often seen as the most important - as it will dictate how you are able to control your board on-snow. Simply put, our flex spectrum runs from PLAYFUL to PRECISE.

In general, more PLAYFUL boards are great for learning how to link turns, press rails, and overall board handling.

In general, more PRECISE boards are often more stable at speed, have more pop, and have more energy than their playful counterparts.

RAILS/PARK

Boxes, rails, bonks, and jibs on-hill or in the streets.

JUMPS/PIPE

Kickers, hips, transitions, and stunt-ditches

GROOMERS

Fresh corduroy.

POWDER

That deep, deep white goodness.

BASES

3D CONTOUR NOSE

8mm of 3D contour (spoon) that is gradually blended from the running surface in order to maintain a predictable ride on hardpack.

CARBON INFUSED 5500 SINTERED BASE

Fast, light, and strong. Our Carbon Infused 5500 base is the cream of the crop. By adding carbon to a sintered base, we've increased wax retention and decreased drag for a faster, smoother ride.

SINTERED 4000 BASE

Our Sintered 4000 base absorbs wax deep into the material for relentless glide and unrivaled durability.

EXTRUDED 2000 BASE

Our Extruded 2000 base delivers a consistent glide and is easy to maintain and repair.

STONE GROUND BASES

K2 offers a Stone Ground finish on boards leaving directly from our factory. This ensures that our snowboards arrive to our customers with a flat, open p-tex base that is structured to perform well in all snow conditions, properly absorb wax, and glide faster than a belt sanded board.

CATCH-FREE TUNE

By bringing the contact points out of the snow, this beginner-friendly tune ensures linking turns without a catch. This small amount of bevel in the tip and tail aids in more confidence throughout the learning curve and unlocks faster progression on all terrain.

CORES/LUMBER

BAMBOOYAH™ PRO CORE

Our all new Bambooyah™ Pro Core takes a decade of bamboo cores and takes it up another notch. Equal parts performance, renewable, and durable, we've blended three different species of wood to create the most premium core in our offering. Bamboo and aspen are placed at 30 ° underfoot to supercharge the edge to edge response and increase the pressure distribution along the edge. We've also placed lightweight paulownia in the tip and tail help to reduce swingweight and complementary tip to tail bamboo stringers help with snap, stability, and damping.

BAMBOOYAH™ BLENDED CORE

Taking influence from skateboard manufacturing, our Bambooyah™ blended cores are stronger than hell. Bamboo possesses a higher tensile strength than steel and withstands compression better than concrete, and that's why we offer these boards complete with a five year warranty.

BAP CORE

We've blended three species of renewable timber to assemble a core that's strong, lightweight, and designed to enhance dampening without the addition of other materials.

ASPEN CORE

A single species of wood ensures a proven flex, durability, and snap.

RHYTHM CORE

Uniquely shaped and designed to complement the mechanics, geometry, and riding style of female snowboarders.

CORE ADDITIVES

SPACEGLASS™

An American made Aerospace grade precure fiberglass core insert used to provide unmatched structural performance at reduced weight. SpaceGlass™ inserts increase edge hold along contact points, reduce chatter, and provide unequalled durability.

SPECTRAL BRAID™

Spectral Braid is a first of its kind variable angle reinforcement (Patent Pending) that allows for precision tuned torsion and flex by altering the fiber orientation along the length of the snowboards. Lively, energetic, and remarkably composed; snowboards with K2's Spectral Braid have stability and control in spades while remaining hyper-maneuverable.

- Designed to enhance stability and control in all snow types, TORSION CONTROL DESIGN combines a progressive torsional flex, with a balanced and even longitudinal profile. Torsionally stiffest in the tip and tail, and more relaxed between the inserts, K2 Snowboards with TCD have both powerful, precise turn initiation and smooth, consistent release in all snow types.

CARBON POWER FORK™

Equal parts snap and energy transfer, the ultra lightweight Carbon Power Fork™ additives are dynamically flexing to optimize the performance in a snowboard. Carbon Power Fork™ additives are strategically shaped to offer greater response and energy return by increasing the width toward the tail - allowing for more material to be engaged, and more energy to be created the harder the tail is flexed.

OLLIE BAR™

Built in place in a pre-loaded cambered shape and placed between the binding inserts, the Ollie Bar™ helps by adding extra snap between the feet to create the ultimate amount of pop.

CARBON TORQUE FORKS™

Carbon fiber stringers in a V-shape that extend from just outside of the inserts to the contact points in the tip and tail for added pop, responsive, and stability in all conditions.

CARBON DARKWEB™

A carbon fiber X-pattern that is strategically placed underfoot and extending out to the contact points to aid in pop, stability, energy transfer. DarkWeb™ is built to speed up edge-to-edge transitions, and keeping you in control at all times.

HONEYKOMB™

Aerospace grade Honeycomb that is strategically placed into the core to significantly reduce weight and create a more nimble board without sacrificing performance.

UNDERFOOT REINFORCEMENT

Fiberglass reinforced binding patches placed underneath the binding mount area to increase board strength and decrease board breakages outside the binding. These reinforcements give riders the best bang for your buck when it comes to durability and come standard on all men's and women's K2

GLASS TECHNOLOGY

ICG CARBON GLASS™

Integrating tip-to-tail carbon fiber stringers into fiberglass layups ensures a smooth power release in and out of turns while increasing pop, liveliness, and longevity of the snowboard without adding unnecessary rigidity. We offer ICG™ Glass in two variations; ICG™ 10 Biax and ICG™ 20 Triax.

TRIAIAL GLASS

A glass laminate with diagonal layers that adds torsional stiffness for increased stability and improved edge hold. The fibers three layers of fibers are woven at 45 ° , 45 ° , and 0 ° . This makes for a more responsive ride longitudinally and torsionally.

BIAXIAL GLASS

Smooth all-purpose performance with a no-frills design. Fibers are woven together at 0 ° and 90 ° , creating a more forgiving flex pattern.

SNOWBOARD TECHNOLOGY CONT.

SHAPES, CONSTRUCTIONS & K2 EXCLUSIVES

VOLUME SHIFT™

We've moved volume from the tips and tails of traditional snowboard shapes and placed it underfoot where it can be better controlled. This makes a wider, shorter design that maintains the same float and stability of a traditional board, but increases mobility and maneuverability. More slashing and better lines in the trees are now a reality.

HYBRITECH™ CONSTRUCTION

Backed by years of rigorous testing, Hybritech is the lightest weight, most durable snowboard construction on the market. Removing all excess sidewall material in the tip and tail and adding a 3D capped edge to increase the bond strength of the fiberglass and decrease the swing weight of the board is what makes Hybritech so revolutionary. Our boards will spin faster, maneuver easier, and last longer than any other boards on the market.

SINTERED P-TEX SIDEWALLS

By using a profiled Sintered 4000 P-Tex material for the sidewalls in all of our snowboards, we are able to offer riders a host of benefits. P-Tex sidewalls are durable and impact resistant, provide a smoother, damper ride, and helps us to reduce waste in the production process.

PROFILE OVERVIEW

Simply put, profile is the tip to tail curve on the bottom of the snowboard. This "profile" can be described as Rocker, Camber, Flat, or any combination of these. K2 offers multiple Profile options, hand picked by model and tailored to work in harmony with the materials and core profile to ensure the best possible riding experience.

DIRECTIONAL COMBINATION CAMBER PROFILE

The best of both worlds. By blending both traditional Camber and Rocker profiles, Combination Camber gives you all the benefits of both; the pop and precision of camber, and the float and predictability of rocker.

TWIN COMBINATION CAMBER PROFILE

The best of both worlds. By blending both traditional Camber and Rocker profiles, Combination Camber gives you all the benefits of both; the pop and precision of camber, and the float and predictability of rocker.

DIRECTIONAL ROCKER PROFILE

An all-purpose profile designed to be the perfect companion for the all-terrain snowboarder. Directional Rocker Profile has medium-rise rocker in the tip, flat in the middle of the board, and low-rise rocker in the tail, allowing for effortless turns on hardpack and ample float in soft snow and crud.

DIRECTIONAL CAMBER PROFILE

The most responsive camber profile in the line features camber running from in front of the front foot to the tail of the board with slight early rise in the nose. This gives the rider the most precision and control possible in any terrain while still floating effortlessly in the deep stuff.

TWIN ROCKER PROFILE

A versatile twin-rocker design built to dominate any freestyle line. Just enough rise in the tip and tail to create a loose, buttery feel without sacrificing pop and response.

TWIN CAMBER PROFILE

A twin camber profile makes the snowboard under your feet lively and poppy helping you track straight into jumps and pop ollies over fences.

TWEAKEND™

We've extended the rocker all the way out to the absolute ends of the board, and for good reason! This unlocks new ride-able surface area and gives you a bigger, more stable platform to press, float, and land on.

BOOT TECHNOLOGY

THE ORIGINAL BOA® BOOT COMPANY

Introducing BOA® Fit System to the snowboard market well over a decade ago, K2 believes that now, more than ever, BOA® is a standout advantage.

SHELL LACING

FOCUS AND ZONAL BOA® FIT SYSTEM

A two reel BOA® Fit System that allows for the upper and lower zones of the boot to be tightened independently.

BOA® FIT SYSTEM AND COILER BOA® FIT SYSTEM

A cable and reel based lacing system that creates even tension and easy lacing operation. This system features low friction guides for even tightening. BOA® Coiler works to automatically retract lace slack so your boots stay nice and neat.

TRADITIONAL LACE

No wires, reels, or pulls needed. Our braided textile laces offer a tried and true feel and customizable fit.

LACE LOCK

Positioned at the transition to the instep to give you a quick and easy ability to zonally lace your boots and keep them that way.

LINER LACING

BOA® CONDA™

A patented K2 liner lacing system that uses a urethane harness to gently hug your ankle, creating unrivaled heel hold. BOA® Conda™ allows for adjusting liner tightness and heel hold on the fly from outside of the boot, even with gloves on.

BOA® MOBILITY CONDA™

Everything you love about BOA® Conda™ with a narrower lace path that allows a bit more freedom to tweak.

3-POINT HARNESS

The 3-Point Harness is a straightforward solution that doesn't skimp on support. This system aims to optimize heel hold, while providing ankle support and unrivaled stability to help reduce fatigue..

REMOVABLE 3-POINT HARNESS

Now with the ability to choose your fit with our removable harness that locks to the shell to give you the choice of the amount of hold you want. Found on the Taro Tamai Snowsurfer and TT Women's models.

FAST-IN

No frills adjustment and locks solid for all day fit and comfort. Easy to use and comfortable all day long.

LINER CONSTRUCTION

K2 AND INTUITION®

Using Intuition® EVA, a patented foam developed specifically to be lightweight, moldable, flexible, and durable, K2 aims to create the most comfortable and best performing snowboard boot liners in the world.

INTUITION® SPACEHEATER™

A liner designed for comfort and warmth, from start to finish. It features reflective heat blanket panels that work to trap heat in and keep cold out. These reflective heat blankets work alongside heat moldable Intuition® foam, internal J-Bars, and 3D molded dual-density EVA insoles to keep your foot comfortable and warm all day long.

INTUITION® PRO FOAM 3D

Our most supportive liner, featuring a high-density Intuition® foam for added support without sacrificing comfort. This liner features both internal and external J-Bars around the ankles, where extra support is needed.

INTUITION® CONTROL FOAM 3D

Built with a blend of high and medium density Intuition® foam, this is our most versatile liner. With internal and external J-Bars and a 3D molded EVA insole, the Control Foam 3D liner is built to provide all-day comfort and support.

INTUITION® COMFORT FOAM 3D

Built for comfort and long-lasting fit, this liner is a softer build and features both internal and external J-Bars for added ankle support and heel hold.

COMFORT FOAM EVA

Focused on out-of-the-box fit and lasting comfort, the Control Foam liner has a forgiving flex and is packed with internal J-Bars for added ankle support.

OUTSOLES

VIBRAM® ROLLSOLE OUTSOLE

Designed with mobility in mind, the Roll Sole™ Outsole aims at providing additional range-of-motion without sacrificing any support (thanks, Harshmellow™). This outsole is ergonomically shaped and allows riders additional maneuverability for next-level heelside carves and surf-style vibes.

VIBRAM® MOUNTAINEER OUTSOLE

The Mountaineer outsole is the first of its kind. An outsole designed specifically for snowboarding and the mountaineering that is required to get to those larger-than-life lines. With Vibram® rubber and a traditional lug design, this crampon compatible outsole is built to work with all the gear you need.

VIBRAM® V5 OUTSOLE

Vibram® V5 Outsole features a full EcoStep rubber and Harshmellow™ pods under the toe and heel to reduce noise underfoot.

THIS GRIPS! PREMIUM RUBBER OUTSOLE

A K2 exclusive built to offer the best possible performance at the lowest possible weight. An EVA midsole meets a dual rubber compound for unmatched damping and grip.

ROLLSOLE™ OUTSOLE

TheRollSole Outsole aims at providing additional range-of-motion without sacrificing grip or support. This outsole is keeps the overall weight of the boot down while offering extra mobility side to side.

RUBBER LIGHT OUTSOLE

Full rubber bottom for maximum grip, durability, and impact absorbing Harshmellow™ technology.

PHYLIGHT™ OUTSOLE

This EVA outsole offers a uniform flex and the durability of a rubber outsole in a lighter-than-light package.

LOW PRO OUTSOLE

A lightweight solid rubber cupsole that grips hard and lasts long.

CLICKER™ X OUTSOLE

The Clicker™ outsole features exaggerated rocker for walkability and a full rubber outsole for both hikability and durability.

BRIGHT FUTURE OUTSOLE

Lighting up the stoke and fun for groms everywhere, this LED light powered outsole is built to be lightweight and have tons of grip for lasting the whole day.

BOOT TECHNOLOGY CONT.

BOOT MATERIALS

We've added premium materials to our snowboard boots to ensure that your boots put in as much work as you do.

REINFORCED RUBBER

Abrasion resistant reinforced outsole rubber is placed in areas of high stress to extend the life of the boot and increase durability.

HDR PREMIUM SYNTHETICS

Eight times more durable than a standard polyurethane material, HDR Premium Synthetics is a proprietary synthetic durable finish designed for extreme conditions. The dynamic resin system provides exceptional abrasion and durability performance well beyond standard synthetic materials.

HARSHMELLOW™

Harshmellow™ is a magical dampening system that replaces industry standard foam dampening materials. Harshmellow™ dampens the specific target vibration for each product and works to create the smoothest ride imaginable.

SPACEHEATER™ FOOTBED

We've gone the extra mile to ensure that you stay warm and comfortable. By adding a reflective SpaceHeater™ material to the footbed on our boots, we're helping to trap heat inside the shell.

Found On: Taro Tamai Snowsurfer, Aspect, Thraxis, Holgate, Ender, Renin, Maysis, Taro Tamai Women's, Estate, Contour

S'CAFE COFFEE MESH

With functionality and sustainability in mind, K2 coffee mesh is made from recycled post consumer coffee grounds that is combined with post consumer recycled polyester. This mesh enhances odor control and moisture management of our standard lining mesh and is made from 95% recycled material with no added chemicals.

LASTING

K2 Snowboarding uses a 1-to-1 lasting system for every liner and shell throughout the entire collection. This ensures the customer will get the best possible fit when they put their foot into a K2 snowboard boot.

TRADITIONAL LAST

Our Traditional Last is based around a D Last with 11° of forward lean.
·Available on Boundary, Lewiston, Darko, Raider, Market, Sapera, Haven, and Belief models.

PERFORMANCE LAST

Our Performance Last is based around a D Last through the forefoot with a more performance-focused heel pocket, and also features 11° of forward lean.

·Available on Aspect, Thraxis, Holgate, Renin, Ender, Maysis, Estate, Contour, and Compass models.

WIDE LAST

Our Wide Last is based around an E 6 ½ Last with 11° of forward lean. Both shell and liner at 7mm wider than our traditional last and boot shell.

·Available on Maysis Wide.

6+3 LAST

We've gone the extra mile to ensure that you stay warm and comfortable. By adding a reflective SpaceHeater™ material to the footbed on our boots, we're helping to trap heat inside the shell.

·Found On: Taro Tamai Snowsurfer, Taro Tamai Women's.
