**Model series description EN**

- **RX12 SL**
  - A race-inspired sidewall and milled handle giving the RX12 even more rebound on the groomers for explosive light turns (SL) and long-big-radius turns (GS). With precise edge grip and non-slip stability, this ski is built for fun.

- **RX12 GS**
  - The perfect choice for skiers looking for a lively yet balanced carving ski with outstanding edge grip.

- **MX99**
  - This is a versatile freeride ski: more responsive and better float, more dampness and precision.

- **MX89**
  - The MRX is a true all-rounder. The 3D shape, triple wood core and carbon-fiber/glass wrapped core of the lightweight TRI technology results in maximum transfer of power, stability and perfect float.

- **MX84**
  - The RX12 SL has a race-inspired sidewall for handling. The proven sandwich-sidewall construction, combined with Hollowtech 2.0 provides more dampness and better grip through short, fast turns. With precise edge grip and explosive short turns, the RX12 SL is ideal for the piste purists out there. This is the go-to choice for skiers looking for a high performance and lively on-piste ski with a short turning radius.

- **MX67**
  - The perfect ski for skiers who enjoy effortless and consistent skiing in all conditions.

- **MX74**
  - The MRX is a true all-rounder. The 3D shape, triple wood core and carbon-fiber/glass wrapped core of the lightweight TRI technology results in maximum transfer of power, stability and perfect float.

- **MX99**
  - This is a true all-rounder. The 3D shape, triple wood core and carbon-fiber/glass wrapped core of the lightweight TRI technology results in maximum transfer of power, stability and perfect float.

- **MX106 HP**
  - The TX106 HP is made for the backcountry and when teamed up with the FREETOUR 12.0 2.0 binding it is also designed to be used as a touring ski. The 3D shape, triple wood core and carbon-fiber/glass wrapped core of the lightweight TRI technology results in maximum transfer of power, stability and perfect float.

- **BX96**
  - The BX96 is a true all-rounder. The 3D shape, triple wood core and carbon-fiber/glass wrapped core of the lightweight TRI technology results in maximum transfer of power, stability and perfect float.

- **FX86**
  - The TX models are built for the ultimate freeride experience. The 3D shape, triple wood core and carbon-fiber/glass wrapped core of the lightweight TRI technology results in maximum transfer of power, stability and perfect float. Paired with Hollowtech 3.0 these skis raise the bar in terms of minimal weight and maximized downhill performance.

- **FX96 HP**
  - The TX106 HP is made for the backcountry and when teamed up with the FREETOUR 12.0 2.0 binding it is also designed to be used as a touring ski. The 3D shape, triple wood core and carbon-fiber/glass wrapped core of the lightweight TRI technology results in maximum transfer of power, stability and perfect float.

- **FX116**
  - The TX116 is made for the backcountry and when teamed up with the FREETOUR 12.0 2.0 binding it is also designed to be used as a touring ski. The 3D shape, triple wood core and carbon-fiber/glass wrapped core of the lightweight TRI technology results in maximum transfer of power, stability and perfect float.

- **PX71**
  - The perfect ski for skiers who enjoy effortless and consistent skiing in all conditions.
**TPX**

The TX models are some of the lightest touring skis on the market. Freeride-inspired sidecuts are teamed with an ultra-light and stable carbon construction. These lightweight touring skis with unbeatable downhill performance enhance the touring experience with smooth, relaxed ascents and playful descents.

**Tour**

The innovative carbon construction with DUAL RIDE technology and Hollowtech 2.0 make the TX60 theanelle touring ski in the KÄSTLE line, with unbeatable downhill performance at minimal weight.

**TX90**

The TX90 is a lightweight ski for relaxed ascents and a lively, high-performance downhill experience. Ideal for changeable conditions – throughout the day or throughout the entire ski season.

**TX98**

The TX98 is ideal for ambitious backcountry skiers focused on discovering untracked powder. Ascents are virtually effortless due to the pared-down weight and the float on the downhill will have you grinning all day long.

**XP20**

Lightweight (long distance skis) precision control with optimum power transmission | narrow base for optimised glide

The innovative carbon construction with FAST GRIP SHOVEL and Hollowtech 2.0 makes the TX20 theanelle touring ski in the KÄSTLE line, with unbeatable downhill performance at minimal weight.

**KX**

Kästle’s top-quality junior skis are for ambitious kids who like to rip on the piste, in the backcountry or through the gates. When they’re having fun, they’re learning without even realising.

**JX67**

High-quality junior ski | athletic and responsive | for the charges of tomorrow

The JX67 has more advanced junior skis covering the grooming and going the lickers in no time.

**JX68**

High-quality junior carving ski | high-performance sandwich construction | for the charges of tomorrow

The JX68, built around a top-quality wood core with Hollowtech 2.0 and a robust base, is a full-blown Kästle ski for youngsters.

**KX66**

The KX66, built around a top-quality wood core with high-end sandwich construction and Hollowtech 2.0 is a full-blown Kästle ski for little racers – or soon-to-be racers.

**KX**

Kästle’s top-quality junior skis for the world champions of tomorrow, with zero compromise on Kästle quality.

Our little mausozz “Holly” makes their first experience fun from the get-go.

**TX65 HP**

A patented steel rim runs around the ski's top circumference protects the lightweight wood construction and the exquisite carbon surface and adds stability.

**TX82**

High-quality children’s ski with "Holly“ design | for the chargers of tomorrow

The individual tailoring approach of the TX ski concept, available from select premium Kästle retailers, is based on four specific factors: terrain preference, skiing ability, body measurements and design style.

**TX100**

We’ve named them SCALA, PROTO and SUPRA – after Kästle models of yesteryear. A patented steel rim runs around the top circumference to protect the aluminium top sheet of these one-of-a-kind skis.

**Supra**

Individually designed for each skier, offering precision, speed and precision for club skis and keen youngsters looking for speed.

**SCALA**

Elegant all-mountain carver | lively and light

The SUPRA’s EASY RIDE construction makes it perfectly suited to the backcountry. The steel rim that runs round the ski’s top circumference protects the lightweight wood construction and the exquisite carbon surface and adds stability.

**XS**

Made for the discerning skier looking for a unique, limited edition ski to take beyond the resort that exists at playful descents and reused ascents.

<tbody>
<tr>
<td>XP30</td>
<td>The versatile XP30 is slightly wider for more comfort when skiing or training. The carbon-reinforced wood construction in lightweight paulownia, and the Hollowtech 2.0 technology for reduced weight result in a perfectly balanced ski.</td>
<td>versatile</td>
<td>The sintered graphite base makes it robust and lends it good glide performance.</td>
<td>The XP30 CLASSIC SKIN version ensures good grip even on hardpacked, smooth snow, and lends the ski smoother and more silent glide performance than any other fish scale cross-country ski. For the XP30 CLASSIC SKIN version, there is no need for previous experience with wax, making it the ideal choice for easy handling in all conditions.</td>
