

METAL CORE

Since our born in November 2001, the philosophy of our company remains true to its principles: specialization, quality, compromise and service, are the values that reinforce our leadership day by day.

In METAL CORE we congratulate ourselves on reaching the objective which many companies can only dream, being able to offer to the most demanding users the maximum level of excellence as regards to the development of the best technologies applied to the design and production of our wheels.

The application of our exclusive technology in R&D and the high level of demand in quality controls, guarantee the maximum performance, reliability and durability to the METAL CORE users.

METAL CORE had become a worldwide reference and leads undeniably the professional sector. We invite you to know us better through our catalogue, where you will find all of our wheels range, technical explanations, advices, etc... As METAL CORE wheels user, you will discover the keys of our success, and you will participate of our enthusiasm in proving that your METAL CORE wheels allows you to obtain the maximum performance in your favourite sport, providing you an important differential regarding other users that don't have METAL CORE wheels at their disposal.

When we started the Metal Core project, one of our goals was to have a high quality product affecting the environment as little as possible. Nowadays, we can consider this goal as accomplished, due to the great responsibility we had achieved in our production lines.

In addition, the chemical formulas of our wheels complies all the necessary regulations so that the environmental impact be almost non-existent.
