BINDINGS

NEW

AXIS-N1-SERIES TECHNOLOGY

Using the Flow Axis-Series baseplate as the footprint, we designed our new Nidecker bindings to match our boots perfectly with a true FlowFit connection.

BASEPLATE

1. ROCKERED CORNERS

The rockered corners on the Axis-N1-Series are designed with added cushioning closer to the center-aisle of the snowboard. This helps the board maintain the best, most natural flex possible.

2. OFF-AXIS POWERBEAMS

Off-axis PowerBeams on the Axis-N1-Series align closer to the toe and heel edges of the snowboard, if the binding is mounted at an angle on the board, for more efficient power and energy transfer for effortless and effective riding.

3. FIXED HEELCUP

The glass-filled, nylon heelcup is firmly fixed to the Axis-N1-Series base forming a strong and rigid unibody-style baseplate. It's the perfect choice for riders looking for a precise, comfortable, all-terrain binding.

4. BANKBEDS

Bankbeds are full-length EVA footbeds with 2.5° canting for optimized fit, support and energy transfer.

5. OFFSET MULTI-DISKS

All adult and youth bindings feature our Multi-Disk, an eight-out-of-ten, these bindings can be mounted on 4-4, 4-4.2, 5-0P and the H4 Channel without the need for an accessory channel-disk. The hole patterns are offset from the center of the disk for more toe-heel or stance-width adjustability.

HIBACKS

ASYM C6-HIBACK

The Asym C6-Hiback is a printed 3D carbon-fiber hiback, with a slightly wider and more cupped top profile than our Hadron Hiback for more knee-hugging energy transfer and high-speed control.

ASYM HADRON-HIBACK

The Hadron-Hiback is an asymmetrical one-piece hiback, molded from a tough nylon. It delivers a smooth balance of support, comfort and a perfect fit with our asymmetrical boot outfalls and end your legs at correct idling angles.

STRAPS

EXOFRAME ANKLE-STRAP

The ExoFrame ankle-strap is an injected TPU frame with the same 3D-hinged Asymetric pattern as the mass Incape that form fit perfectly to your foot. The ankle ExoFrame is suspended over the ExoFrame strap to lock in your foot for unequalled comfort and performance.

AUXTECH

HYBRID POWERSTRAP

The Hybrid PowerStrap connects the ankle strap to the toeclip strap for the most efficient energy transfer into your toe-side turns and the perfect mix of control and comfort.

HEXO TOECLIP STRAP

The Hexo toeclip strap features Aux Tech, a 3D-hinged Asymetric pattern for unmatched forefooting the heelcup of your boot.

AUXTECH

COMFORTFIT ANKLE-STRAP

The ComfortFit ankle-strap is a traditionally stitched strap with a foam-core for the perfect mix of control and comfort.

BUCKLES

ALUMINUM AXION-RATCHETS

Based on a tried and true design, the Nidecker Axion-Ratchet with an aluminum lever is smooth as butter to get you in and out of your straps with ease.

PROTON-RATCHETS

Lightweight and easy to use, the Proton-Ratchet is built on the same base as the Axion-ratchet but with a durable, molded composite lever.

ATOM-RATCHETS

Big, smooth and easy to use, the Atom-Ratchet with a durable, molded composite lever is the perfect ratchet for our kids bindings.

QUICK-SET

Adjust your straps on the medial side to fit your foot and keep the footstrap centered. Easy and precise, the numbers on the ladder straps help you conveniently dial in your setting.
