

PRO-9

CSE

Designed by Carl Schaper, the Pro-9 performance longboard is Bonga Perkins' favorite all-around board. For over 20 years now, former 2-time World Champion Bonga has been riding slight variations of this shape. The most significant improvement is in the Pro-9's nose riding capability.

The Pro-9 is a longboard with as much shortboard crammed into it as possible. Carl Schaper will often point out the back-third of the board, as it fits almost perfectly on his 6'2 step up, with the same thickness, tail dimensions and rails. The bottom has a soft roll to V in the middle, running into V with a double concave in the tail.

Bottom : Soft roll to mid V to V to double concave

Rider : Intermediate - pro

Wave Type : All conditions

The Pro-9, designed as a single fin or quad fin set-up, is a low-volume, extremely high-performance longboard, capable of doing it all with tons of maneuvering and solid nose-riding!

Built with custom surf epoxy lay-up with a clear UV-stable resin and satin rub finish and combined with a CNC-cut EPS core, laminated with full 6+4oz deck and 220g biax bottom, a 4oz fin patch, a 6mm wood stringer, bottom carbon stringer and carbon-reinforced tail, giving you a durable longboard with great flex and performance, that feels light and responsive.

The Pro-9 comes in a 4+1 fin configuration enabling you to be creative in your setup as a quad or thruster. NSP positioned the Surf 10 fin box slightly further back, to make it available for a thruster set-up.

The Pro-9 is available with FTU fin boxes and compatible with Futures® Fins (fins not included).
