PROTECTION TYPE & FEATURES

SCOTT ALPRIDE AIRBAG SYSTEM 2.0

Weighing in at a mere 690 grams, SCOTT Alpride Airbag System 2.0 is one of the lightest avalanche airbag systems on the market. Inspiration for this gas cylinder system came from a similar design found on emergency life jackets – a maintenance free system that has been trusted for almost 50 years. The gas cylinders used in the system are affordable and fully disposable, allowing the user to quickly and easily install new cylinders for the next adventure. Air travel with these cartridges is approved by IATA.
