TECHNICAL SOCKS
FOR EXERCISE
IN THE SWIMMING-POOL

The separate big toe allows a better control of the balance and greater stability and directionality of movement.

WEAR RESISTANCE AND PROTECTION

CORDURA® inserts ensure a good endurance over time, protecting the foot from imperfect floors.

ANTI-ROLLING SYSTEM

The sock fits tightly to the foot, allowing a perfect symbiosis between foot and sock, improving the dynamic equilibrium.

CUTS TO FACILITATE FLEXION AND EXTENSION OF THE FOOT

The flexion of the ankle and of the foot is fundamental elements of human movement.

FILATI

Tactel

Soft and lightweight fiber, thanks to its excellent breathability ensures optimum comfort in all weather conditions (hot or cold).

ELASTOMERIC WITH GRADUATED COMPRESSION

This special yarn ensures a perfect fit of the sock to the foot and makes a constant compression that stimulates the well-being of our feet during sports activities.

INNER SOLE ANTI-BACTERIAL IN COPPER

The copper, in fact, has a natural bacteriostatic properties, that is the ability to inhibit the proliferation of bacteria, avoiding the formation of warts and fungal infections of the foot.

PERFORMANCE

Under the foot, which provide a natural massage, guaranteeing a return of energy that makes the exercise more effective, with less muscle fatigue.

T-MIX NON-SLIP OUTSOLE

The adhesion and the stability on wet surfaces improve the efficiency of the movement and reduce the risk of accidents...

CHLORINE-RESISTANT

Double treatment of resistance to chlorine, both on the yarns and on the sock.
