

ATHLETE STORIES

GINA Lucrezi

2016 Female FKT of Mt. Whitney
Standard route, round-trip and ascent

« Thousands of women hike Mt. Whitney so I felt it was time to put down a speed attempt in hopes of triggering them to push their athletic limits in chasing the record. The human body can do amazing things, and I hope to inspire more women to explore the capabilities their bodies provide them. »

VESTA TECHNOLOGY

We asked women exactly what they wanted – then we built it

WHAT IS A VESTA?

Our Jenny Collection was the world's first line of women's-specific running vests, belts, and handhelds. They were a massive success, won many awards, and the Vestas have now become part of the Signature Series™.

They are still designed by women specifically for women. The fit is unique, with lots of storage organization, and comfort is key.

THE TECH

Introducing our exclusive Comfort-Cinch technology. Each Vesta provides fine-tunable lateral sizing and stability adjustment from the small of your back. The sides of the Vesta are seamless and chafe-free for endless comfort.

TESTIMONIALS

"It's no surprise many customer reviews of the Ultimate Direction Adventure Vesta floating around the internet are awarding this pack 5 stars." – The Gearist

"Fans of classic running-vest design will love the Ultra Vesta. It's got everything you'd expect a running vest to have."

ATHLETE STORIES

For the past four years, the only people who finished the Barkley Marathons were wearing the PB Adventure Vest

JARED Campbell

The Barkley Marathons Winner 2014 & 2016

Jared has two kids, built his own house, is a Lead Engineer at his place of employment, climbs 5.13, kayaks Class V, speed descends technical canyons, and won the 2012 Hardrock 100. Jared chooses the PB Adventure Vest.

JOHN Kelly

The Barkley Marathons Winner 2017

John is an “ultrarunning data scientist with a triathlon habit”. He and his wife and three children live in flat Maryland and trained for Barkley by running 13,834 vertical feet in less than 4 hours on a treadmill in his basement. John chooses the PB Adventure Vest.

VEST TECHNOLOGY

The Comfort Cinch™ is here to change the game of personalized fit.

The Comfort Cinch™ system takes technical design to a new level.

The lateral adjustment happens over the small of your back instead of on your sides, for greater comfort and improved sizing and stability. Comfort-Cinch makes allows the vest to fit like your favorite shirt.

“I’m blown away by how good this feels... I’m really liking it!” - Anton Krupicka

ANDREW Hamilton

Andrew Hamilton has been called a “super-human mountaineer.”

In 2015 he climbed all of Colorado’s 14,000+ peaks in less than 10 days, and later set the FKT for Nolan’s 14, which he accomplished solo and unsupported.

Andrew Hamilton only uses UD Fastpacks. “In the high mountains, going super-minimal is a bad idea” he states. “I might need an insulated jacket, and sometimes even snowshoes... to not have what I need slows me down more than bringing it.”

ADVENTURE TECHNOLOGY

InfiKnit™ Mesh

Fastpacks are being used for a quick weekend to Cozumel or across the Wind River Range. Here’s why.

It’s still a vest – The harness keeps the load very stable, and water, food, phone, and maps are up front where you need them, not in the back where you can’t find them.

Tons of external storage – Multiple stretch-mesh pouches enable you to quickly access gear, and store wet gear where it can dry.

One main compartment – Anything will fit, and the ‘dry-bag’ style roll-top closure is very lightweight, can never break, and expands for big loads or contracts to stabilize small loads.

InfiKnit™ – The entire back-panel and harness are one single piece, with no seams, so there is no chafing or hot spots.

 **INFKNIT**

The Ultra Jacket v2 – the coolest jacket in the world.

Four unique technical features that dramatically improve performance

1. Tunnel Effect™ Hood (patent-pending) for temperature and moisture control
2. FlipMitts™ stowaway or deploy for amazing warmth for no additional weight
3. Functional hood that moves when you do, including a brim-stiffener for rain protection
4. Underarm gills for ventilation

TUNNEL EFFECT™ HOOD for temperature and moisture control. Mesh panels in the front and rear allow ventilating air to flow under the waterproof fabric.

FLIPMITTS™ for stowaway, on-the-go mitts to keep you warm and dry. Mittens flip out from inside the sleeves, keeping your hands protected from the elements when you need it the most.

WATERPROOF & BREATHABLE

Our proprietary fabric is both waterproof (testing above 30,000mm of water pressure) and breathable (testing over 13,000 Water Vapor Transportation Rate).
