Downloading APP for Phone and pair with Device

1. Turn on/off

Turn on - press the power button for 5 seconds or plug in the charger for charging Turn off - press the power button for 5 seconds to turn off the device.

- ² Downloading and installing APP
- Scan QT code with mobile phone to download and install APP or search, download and install "Fundo" app from App store or Google Play Store on your smart phone.
- Note: mobile phone must support Android 5.1 or IOs 8.0 or above and Bluetooth 4.0 or above.
- 3. APP binding device
- Activate Bluetooth on your phone

Open APP and click on the "More", then in "MY DEVICE" click "+Add device"

Click on your device on the device list

If the connection is successful, "Connected" appears next to you device name, and the app will synchronize data from the smart watch.

Bluetooth connection between phone and device may disconnect in some circumstances, the most common of them are: phone and device are too far from each other(more than 10 meters), there are some walls between them, there are some magnetic or radio interference in environment, user close the application working in background, restart the phone, user click on the one-button cleaning of the phone.

Bluetooth should reconnected automatically when the reasons for its disconnection disappear.

Introduction on the Function of Device

The main screen menu interface is switched, such as the interface shown below.

When the device and APP are first time connected and paired, the time, date, number of exercise steps and calorie will be synchronized with of the mobile phone.

Introduction to Main Interface Function

1. Drop-down menu

The interface slides down to open the drop-down menu screens.

- a) Icon on the left, shows the Bluetooth connection status.
- b) The top middle icon shows battery status

Click the middle icon to turn on/off the do not disturb mode and turn on the do not disturb mode, and only find out if there is a vibration reminder for the device and alarm.

- ^{a)} The icon on the right can adjust the brightness of the screen.
- 2. Walking

Steps, calories and distance will count automatically after start of using the device.

The data is displayed every specific number of steps, their amount depends on distance already walked and device software version (between 3-25 steps)

3. Sleep

Sleep monitoring period: from 21: 00 p.m. to 09: 00p.m. the next day, after the data generated by the device exits sleep monitoring, click on the upper left corner of APP sleep interface to synchronize the sleep data at the device end to the APP.

4. Music

When the mobile phone is connected to the device, music playing/pausing and song switching in the mobile phone music player can be controlled by device.

5. Weather

The weather page will display the current weather, however the weather data will not be available until the APP is connected. If the device and APP is disconnected for a long time, the weather forecast will show the weather in a day of last updated or show no data.

6. Sport

Sport modes available: walking, running, cycling, swimming, mountain climbing, football, basketball, table tennis, badminton.

a) Enter sport mode and find the right kind of activity by slides down and select by click the screen to enter.

b) Sliding the screen to the right will jump to other data interfaces,

c) Click on the top right corner to "pause" the recording, when paused can back to the recording by click on the top right corner or stop and save the data by click on the top left corner " \Box ".

d) When the distance is more than 200 meters or the activity time is more than 5 minutes, the data can be saved. If this conditions are not met the data cannot be saved.

7. Heart rate

Place the device on the wrist (left/right hand) correctly and enter the heart rate menu to measure the heart rate. After the device is connected with the APP, the heart rate data will be synchronized to the APP in real time. In APP interface slide to the right to "heart rate" page see the time of the test and the average heart rate data.

a. Keep the heart rate sensor clean and close to the skin when measuring the heart rate. If you wear it too loosely, the sensor's light will be exposed, resulting in inaccurate measurement values. Do not look directly at the sensor green light.

b. During detect heart rate, please keep your body inactive and sit still while detecting heart rate, otherwise the time for heart rate measurement will be prolonged or data will be inaccurate. If there is a big difference in the measured data, please take a break to re-measure, and the average value obtained after 5 consecutive measurements will be more accurate.

c. Heart rate measurement, can be different when talking, eating, drinking, etc.

d. Confirm there is no dirt on the bottom of the heart rate sensor during measurement. Skin color, hair density, tattoos and scars may affect the accuracy of the test results.

e. Longtime measurement may lead to overheating of the device. In case of overheating, please remove device until it cools down.

f. The cold weather will affect your measurement results. Please measure while keeping warm.

8. Blood pressure

Put the device on the wrist correctly and enter the blood pressure menu to measure a single blood pressure value. Blood pressure data will be synchronized to APP if connected. Slide to the right in APP to check the time of test and historical data of blood pressure high and low values.

9. Blood oxygen

Put the device on the wrist correctly and enter the blood oxygen menu to measure the single blood oxygen value. Blood oxygen data will be synchronized to APP. Slide to the right in APP to check the test time and blood oxygen history data.

Note: The data of Heart rate, blood pressure and blood oxygen measurement are for reference only and cannot be used as a basis for medical related aspects.

10. Alarm

When the device is connected to the APP, the alarm clock set inside the APP can be synchronized to the device. Up to five alarm clocks can be set. Clicking on the icon on the device screen will stop the vibration alert.

11. Stopwatch

Click the stopwatch to enter the timing interface, click the start icon to start timing, the icon on the left is a single timing record, and the icon on the right is paused. After pausing, click on the top single timing record to view the records at different times. Slide left on the screen will exit and the previous timing is cleared.

12. Camera

When device is connected to APP, click on the camera function of the device, the camera of the cell phone will start, click on the device camera icon, and the cell phone will start taking photos.

13. Find phone

When the device is connected to APP, clicks on Find phone, and the phone will pop up with a ring tone.

14. Timing

After setting the time, start counting down.

15. Setting

15.1 Sedentary

This function is turned off by default. In device can turn this function on or off manually. Set up of the sedentary reminder can be done in APP settings when phone is connected to device. 15.2 Flip over
