customer service

### Maintenance

- Spinlock products are made from the best quality materials for durability and low maintenance in a harsh marine environment.
- For reliable operation, flush your tiller extension regularly with FRESH water to remove salt.
- Do not lubricate locking mechanism. Mineral oil & solvent based lubricants like "WD40" will accelerate the ageing of plastic components and attracts debris into ball lock mechanism.
- Never sail with a damaged or bent tiller extension.

customer service

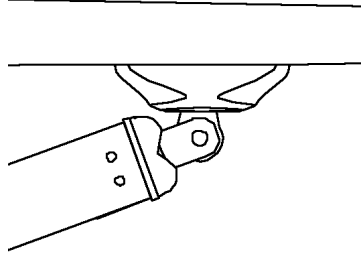

### How to install new swivel joint

- Remove any packaging on tube or E-JOINT.
- Insert plastic swivel end into tube.
- Ensure no damage to tube and that plastic moulding is inserted into tube such that stainless retaining pins will locate thro' tube into moulding.
- Insert stainless fork.
- Insert both stainless retaining pins, ensuring fork, tube and moulding are captive.
- Note: Do not force or strike the E-JOINT onto the tube.

### How to remove old swivel joint

Remove the two retaining stainless pins from existing swivel end, using hammer and tap.

Once both pins have been removed, the swivel end can be removed from tube. Simply pull tube and swivel end apart.
